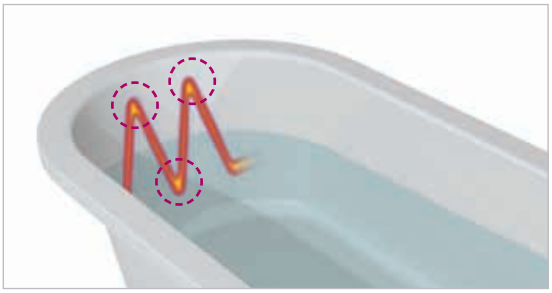
THERMAZONE™

FOR PEARL SERIES BATHTUBS ONLY

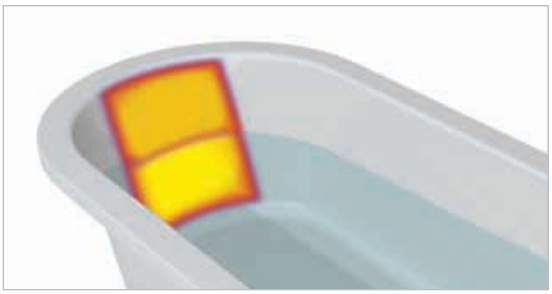
Lean back and melt into the Pearl Series bath's ThermaZone for an experience that will leave you feeling totally relaxed. Taking the traditional heated backrest to new heights, continuous heat flows through a larger surface to ensure you soothe those aches and pains in your neck, back and shoulders. ThermaZone calms damaged tissue, relieves back stiffness and pain, and increases flexibility and comfort. Great therapy choice for the customer that just wants to soak! So, relax while your batteries recharge… talk about a concept that is not hard to warm up to!

TRADITIONAL HEATED BACKREST

While other manufacturers offer a heated backrest option, this does not enable true heat therapy. Heat flows in a non-uniform pattern and is trapped in the bends, creating undesired heat spots instead of offering consistent heat throughout the backrest. Furthermore, the traditional backrest only uses air from the blower, not a dedicated heating element. The temperature cannot be customized, nor can it help you achieve the true benefits of heat therapy.



THERMAZONE

ThermaZone has two temperature levels – above and below water – to maximize the therapeutic effect on your body. Heat is constant and continuous throughout a larger surface, enabling you to soothe the aches and pains in your neck, back and shoulders. Customization allows you to increase or decrease the intensity of the heat with a single touch of a button.


Combine with a Pearl bathtub alone or with a True Whirlpool or Aerofeel system. Note: cannot be combined with water or air backjets.
